NEWS ANNOUNCEMENT

For Immediate Release

Webb Wheel Products Introduces Aluminum Hubs for Trailer Axles

Tell City, IN (March 22, 2010) Webb Wheel Products, a leading supplier of wheel end equipment has added two aluminum trailer disc wheel hubs to their OEM product offering. The new Webb aluminum hubs have been rated for 25,000# axle gross vehicle weight (GVW), matching or exceeding competitive aluminum hubs, and weighing 1 to 3 lbs. less.

The new hubs were designed by Webb to fit the most popular trailer axles. Part number 4023 for "TN" axles weighs just 31 lbs complete with studs and bearing cups and the "TP" axle hub, part number 4343, weighs in at 33 lbs. While the new Webb aluminum hubs are the lightest available in the market, the design is very robust. The results of both SAE J1095 and Webb performance testing at a 25,000 lb. axle rating indicated exceptional durability characteristics for both hubs.

These Webb aluminum hubs are a good combination with the light weight Webb Vortex drum. Specifying trailer hub and drum assemblies as Webb aluminum hubs and Vortex lightweight gray iron drums can save vehicle operators 28 pounds per axle-end, or 112 pounds per trailer, as compared to standard hub and drum configurations. OEMs and fleets for decades have relied on the dependability of Webb wheel end components. Now with new, innovative products that weigh less and perform better they can spec premium components from a supplier they trust. Webb aluminum hubs and Vortex drums can

improve operation performance with added payload, improved fuel efficiency and reduced maintenance costs.

Webb Wheel Products, headquartered in Cullman, Alabama, is a Marmon Highway Technologies/Berkshire Hathaway company. Marmon Highway Technologies (MHT) supports the highway transportation industry worldwide with a wide range of high-quality products and services. Webb Wheel OEM Business Unit is headquartered in Tell City, IN.
