NEWS ANNOUNCEMENT

For Immediate Release

Webb Wheel Products Adds Training Toolbox to Website

Cullman, AL (April 27, 2011) Webb Wheel Products, Inc. has added a new Training Toolbox to their website. The material at <http://www.webbwheel.com> draws on Webb's long experience in the commercial vehicle industry to clearly show the proper procedures for maintaining wheel-end components for the greatest reliability, durability and performance. Webb also shows in detail the problems that can be caused when improper procedures are followed. The videos and downloadable documents are excellent tools for training technicians and for the development of proper maintenance practices.

Three new videos are now available. Two show the proper wheel end installation procedure for 10-stud, hub piloted or FN mounting systems and for 10-stud, stud piloted or BSN mounting systems. Each installation video shows step by step the proper ways to inspect, clean, determine component replacement and lubrication requirements, correctly mount the drum and install the disc wheel. The consequences of not following Webb's recommended installation procedures outlined in a separate video can include drastically reduced performance and can lead to component failure. A downloadable PDF document in the toolbox addresses the two most common warranty returns seen for brake drums, "out-of-round" and "cracked". This document addresses the potential causes of these two conditions, as well as describes what to look for to help diagnose the issue.

Additional videos and downloadable PDF documents will be added to the training toolbox in coming weeks.

Webb Wheel Products, Inc., headquartered in Cullman, Alabama, manufactures hubs, brake drums and rotors for medium- and heavy- duty trucks, trailers and buses. Webb Wheel is a Marmon Highway Technologies®/Berkshire Hathaway company. Marmon Highway Technologies (MHT) supports the highway transportation industry worldwide with a wide range of high-quality products and services.
