

56864B Brake Drum Re-Design

Webb Wheel is pleased to announce the release of the newly re-designed 56864B brake drum. Effective immediately, this new brake drum will supersede the original version. The newly designed drum has all the same features of the original drum, with the addition of Webb's patented CRT (Cool Running Technology) vents. This advanced drum design maximizes air flow into the wheel-end allowing the brake drum and its corresponding brake linings to operate 10% cooler and last 10% longer. Cooler operating temperatures lead to extended product life and lower maintenance cost. This newly designed brake drum weighs 104 lbs. and is intended for drive and trailer applications up to 23,000 lb. GAWR. The image below provides a visual comparison for customers to differentiate the original design from the updated design. If you have any questions regarding this change, please contact Webb's Engineering department via email to engineering@webbwheel.com or call 800-633-3256.
