

2723 Oil Plug Update

The purpose of this bulletin is to notify customers of the recent change to the oil fill plug used in Webb's 2723-disc wheel hub. The 2723-disc wheel hub is currently supplied with a 3/8-18 NPT oil fill plug that requires sealant to be applied to the threads of the plug. Effective immediately, the 2723-disc wheel hub will be supplied with a 9/16-18 O-ring style oil fill plug which does not require the need for sealant. All 2723-disc wheel hubs will come with the O-ring plug installed and torqued to Webb's recommended specification of 20-25 ft-lbs. The advantages of the O-ring style plug are outlined below. If you have any questions regarding this change, please contact Webb's Technical Department via email to engineering@webbwheel.com or call 800-633-3256.

Advantages of an O-ring Style Oil Fill Plug

- O- ring plugs eliminate the need to re-apply sealant after multiple installations
- O-ring plugs eliminate torque variation due to excessive/insufficient thread sealant
- O-ring plugs eliminate the possibility of contamination in the hub due to improper application of sealant
