

NS225 Calipers Offered with a Stepped Wear Sensor

A select number of Webb NS225 calipers are now available with a gold pin, stepped wear sensor integrated into the chain cover. This sensor is only offered on calipers that have an "A" suffix in the part number (i.e. "KL1400A", "KL1400A-01"). The cover is designed to accept either clip type or screw type wear sensor cable connectors (Figure 1). Each cover comes with a pre-installed o-ring sealing plug (Figure 2) designed to keep moisture and dust out of the sensor when used on vehicles that are not equipped with wear sensor wiring connectors. This sealing plug should be left in-place when the vehicle's wear sensor wiring connectors are not utilized (Figure 3). If you have any questions regarding this bulletin, please contact Webb's Technical Department via email to engineering@webbwheel.com or call 800-633-3256.
