

77710B Obsolete: Supersedes to 77805BW

Effective immediately, the 77710B has been made obsolete and will be superseded by the newly designed 77805BW Vortex with CRT vents. The 77805BW has all the same features of the 77710B, with the additional benefits of Webb's patented CRT (Cool Running Technology) vents and wear indicator. Webb's CRT vents maximize air flow into the wheel-end allowing the brake drum to operate 15% cooler and last 25% longer. In addition to cooler operating temperatures, the CRT vents provide a pathway for debris to exit the drum. This helps reduce grooving by minimizing the buildup of dirt, debris, and brake dust on the braking surface. The wear indicator allows technicians to take the guesswork out of repairs, ensuring you get the maximum life out of each brake drum. Both patented features are intended to lower maintenance cost by decreasing vehicle downtime.

The 77805BW weighs 93 lbs and is directly interchangeable with the 77710B. The image below provides a visual comparison for customers to differentiate the original design from the updated design. If you have any questions regarding this change, please contact Webb's Engineering department via email to engineering@webbwheel.com or call 800-633-3256.
