SERVICE BULLETIN NO. 45

BRAKE DRUMS:	65540	65545
	65541	65546
	65542	65547
	65543	65549

The exterior profiles of the brake drums listed above have been changed to accommodate the implementation of new machining procedures in our manufacturing facilities. The change amounts to the relocation of the casting identification lettering to the band area and the incorporation of several indentions in the drums for machining purposes only.

These changes affect the cosmetic appearance of the drum exterior only and do not affect the fit, form, function or interchangeability of these drums. Old style and new style drums may be mixed on a vehicle without affecting brake balance or performance.

The visual difference between the old and new style brake drums is highlighted on the illustrations above. Please feel free to contact our Product Engineering Department if you have any questions regarding this change.
