## **SERVICE BULLETIN NO. 47**

### **BRAKE DRUMS**

Because of the increased emphasis on computer driven information, we find it necessary to request the following change in your order entry procedures for brake drums. This change is especially important to those of you entering orders by means of TRANSNET.

As you are aware, our brake drums are available with several suffix (option) codes which are:

<b>Suffix Code (Options)</b>	<b>Description</b>	<b>Sample Part No.</b>
A	Special Drilling	62997A
<b>B</b>	<b>Balanced</b>	66824B
C	Special Drilling/Balanced	65256C
D	Undersize/Balanced	65166D
E	Countersunk Mounting Holes	66893E
<b>F</b>	<b>Standard Drum</b>	68765F
G	Countersunk Mounting Holes/Balanced	66891G
U	Undersize	68012U
V	Special Drilling/Undersized	64115V

We request that, as soon as possible, future orders indicate the suffix (option) code you are purchasing.

As stated above, this is very important to those of you entering your orders via TRANSNET as our computer system will not accept a brake drum part number in this method of order entry without a suffix (option) code.

We are in the process of updating our price lists and catalogs to reflect the standard suffix (option) codes on all brake drum part numbers. The standard suffix (option) codes are generally the "F" and "B" codes. You must advise us if any of the other suffix (option) codes are required.

We apologize for the necessity of requesting the above and appreciate your cooperation.
