SERVICE BULLETIN #53

ALUMINUM HUBS FOR

Dana Spicer.....P-22
Eaton.....225P, 230P
Fruehauf.....PROPAR

Ingersoll...A24H, A24S, F24
Meritor.....TP

In January, 1998, Con-Met will discontinue supplying Original Equipment Manufacturers with Aluminum Hubs using Threaded Hub Caps for Trailer Axle Applications.

This will affect our Aluminum Hub part numbers **1391**, **2391**, and **2398**. Con-Met will replace these hubs for OEM requirements with comparable hubs having a bolt-on hub cap arrangement as indicated below.

The following action will be taken during the next month on the 1391,2391 and 2398 hubs.

1391 - No longer available from Webb. Contact Con-Met for requirements. Replacement hub using bolt-on hub cap not yet released by Con-Met.

2391 - No longer available from Webb. Contact Con-Met for requirements or replace with Webb **2341** using bolt-on hub cap for both service and production requirements.

2398 - No longer available from Webb. Contact Con-Met for requirements or replace with Webb **2397** using bolt-on hub cap for both service and production requirements.

A hub cap having a 6.75 diameter bolt circle will be used on new hubs, 2341 and 2397. This hub cap will not be available from Webb.

The same brake drums used on the 2391 and 2398 hubs will be used on the new 2341 and 2397 hubs.

Contact our Sales or Engineering Departments with any questions regarding the above information.
