SERVICE BULLETIN #60

Hubs & Spoke Wheels With 80-Tooth ABS Tone Rings

Effective February 1999, Webb Wheel Products will begin to change over all **ABS applications involving 12-1/4" brake sizes to an 80-tooth ABS tone ring** in lieu of the current 100-tooth tone ring. Although there have been no reported field problems, the ABS system suppliers have recommended an 80-tooth tone ring for applications involving smaller tire sizes for optimum ECU performance.

This change will affect Webb hub part numbers 1051, 1056, 1251, 1256, 2027, 2327, and spoke wheel part number 7015. The new 80-tooth tone ring assemblies will carry a new part number "T80" suffix designation to minimize any confusion. This change will be phased in on new orders starting in February 1999. The 100-tooth tone ring assemblies will continue to be available for service replacements of any existing assemblies in the field.

This conversion will not affect any existing ABS system equipment's; however, the **100-tooth and the 80-tooth hubs are not interchangeable and should not be mixed on any one vehicle.** Contact our Sales or Engineering Departments if you have any questions regarding this product change.
