## **SERVICE BULLETIN # 68**

### **Con-Met Aluminum Hubs**

With the release of our "Platinum Series" Aluminum Hubs, we have begun the process of reducing our inventory of Con-Met hubs.

We currently have three (3) aluminum hubs released, our 4023 for RN type axles, 4343 for TP type axles, and 4653 for ArvinMeritor R series type short drive axles. Additional hubs are being tested and others are in the design phase.

Attached is a list of Con-Met hubs we currently offer as part of our product line. Inventory status and the action we plan to take with each hub are indicated. Also indicated on each hub, is the Webb aluminum hub that replaces it.

We will make every effort during this process to make sure we have either Webb or Con-Met hubs available on high activity hubs. At the same time, we are making every effort not to have excess inventory of Con-Met hubs on hand as our Webb "Platinum Series" Aluminum Hubs are released. Hubs with low activity or no activity will no longer be purchased from Con-Met.

If you have any questions regarding this bulletin, please advise.
