SERVICE BULLETIN # 72

Clarification of Applications

We have been asked to clarify application information for our Trailer axle hubs used in both standard and single tire applications.

Trailer axle hubs manufactured by Webb Wheel Products, Inc. are designed for dual wheel mounting or for single wheels with ½” offset or less.

Webb recommends the use of the “P” spindle trailer axle wheel end for Michelin “X One” tire applications using the new 2.00-inch outset rims.

Only Webb hubs 2323, 2333, 2343 and 4343 are approved for use with the “Super Single” tire with 2.00-inch outset. When used in this application, the Hub Dynamic Capacity’s on these Webb hubs are reduced to or remain at 11,000 lbs per wheel end.

If any questions arise with regards to this or any other information regarding our products, please feel free to contact our Engineering or Sales Department at the address and phone number shown on this bulletin or at sales@webbwheel.com.
