SERVICE BULLETIN # 74

Disc Brake Rotors for ABS Applications

The purpose of this bulletin is to announce a change being made to disc brake rotors, which we manufacture and furnish for ABS applications. It covers rotors that are machined with ABS teeth.

Effective immediately, all rotors having machined ABS teeth will be coated with Magni 109, which will help prolong life of the ABS teeth.

Webb rotors receiving this treatment will be identified with a (-65) suffix. Current rotors included in this change are 54769-65, 54770-65, 54771-65, and 54778-65.

We hope that you are pleased with this product improvement. If any questions arise with regards to the above, please feel free to contact our Sales or Engineering Department at (US) 1-800-633-3256, (CAN) 1-800-257-3889 or E-Mail sales@webbwheel.com.
