SERVICE BULLETIN # 78

TRANSIT DRUM BALANCING METHOD

The purpose of this bulletin is to notify all customers who buy or use transit bus brake drums that our method of balancing will be changing. Currently we balance all transit brake drums through the use of welded weights. The new method of balancing will be to balance these drums by removing metal from the outside of the band diameter as shown below.

This change will be phased in over the next six (6) months starting July 5, 2003. This change will enable us to balance transit bus drums more efficiently and to improve this product by eliminating the welding of steel weights to the outside of the drum.

If you have any questions regarding this change, please contact us at the address and phone number shown on this bulletin or at sales@webbwheel.com.
